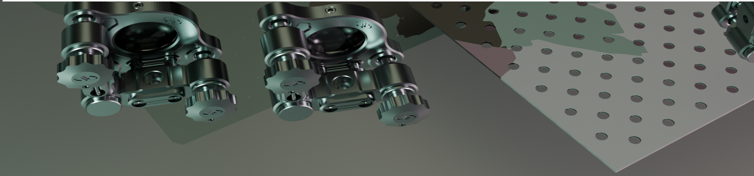
Generating and teleporting entanglement for quantum networks

Adrian Udovičić
Supervisor: Assoc. prof. dr. Rainer Kaltenbaek

University of Ljubljana, Faculty of Mathematics and Physics

23.05.2024, Ljubljana, Slovenia



Contents

Introduction

Motivation

- Bright source of entanglement
- Training in quantum technologies in Slovenia
- Quantum Network for Slovenia
- Testbed for industrialized version

Theory

1. SPDC
2. Entanglement swapping

- Spontaneous Parametric Downconversion

- Spontaneous Parametric Downconversion

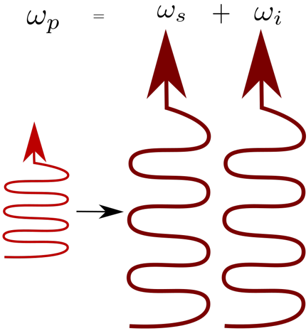


Figure: Illustration of SPDC

- Spontaneous Parametric Downconversion

$$\omega_p = \omega_s + \omega_i$$

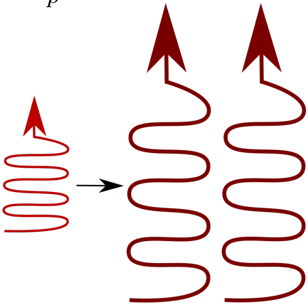

Figure: Illustration of SPDC

- Non-degenerate

Table: Comparison of different sources

Who	[1]	[2]	[3]	[4]	[5]
Type	0	II	II	II	0
Pairs (s mW nm)	$2.5\ 10^6$	$87.5\ 10^3$	$273\ 10^3$	$5\ 10^3$	$278\ 10^3$
Bandwidth/nm	106	0.3	0.3	1	2.3

Figure

- Phase Matching, Quasi Phase Matching

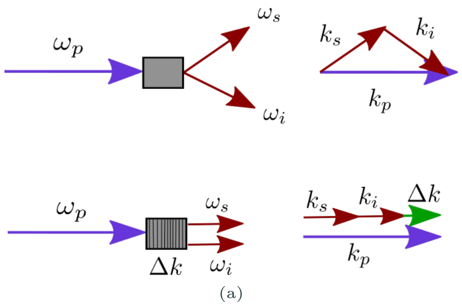

Figure: Illustration of Phase Matching and Quasi Phase Matching.

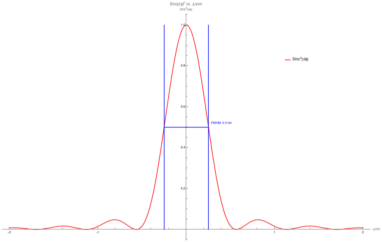
- Bandwidth
- Brightness

Figure: Wavelength bandwidth of a) Type-2 crystal with a polling period of 9,12 um Type-0 crystals with polling periods of b) 19,25 um

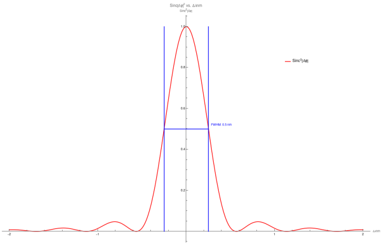


(a)

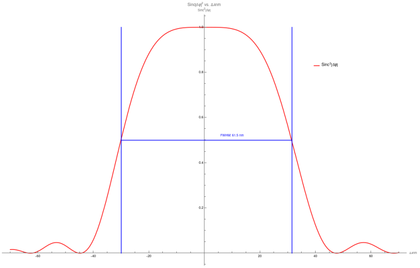
Type-II vs Type-0

Bandwidth

Figure: Wavelength bandwidth of a) Type-2 crystal with a polling period of 9,12 um Type-0 crystals with polling periods of b) 19,25 um



(a)



(b)

Table: Brightness comparison

$Hz/mW/nm$

FMF		IJS
Type-II	**Type-0**	**Type-II**
7,8 $\times 10^6$	2,6 $\times 10^7$	0,05 $\times 10^6$

Most important Dead-time dependency

Fiorentino Expected efficiency Might not be important

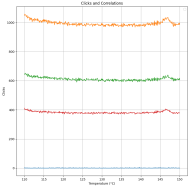
- FMF/IJS
- Quantum Repeaters
    1. Quantum Memory - wrong wl for now, have to figure out

- Focusing parameters

$$\xi = \frac{L}{kw^2} \tag{1}$$

- Heralding

Figure: Temperature scans of Type-0 crystals with different polling periods, a) misaligned 19,25 μm, b) 19,25 μm, c) 19,45 μm, d) 19,65 μm



(a)

Present state
Phase Matching Temperature

Figure: Temperature scans of Type-0 crystals with different polling periods, a) misaligned 19,25 μm, b) 19,25 μm, c) 19,45 μm, d) 19,65 μm

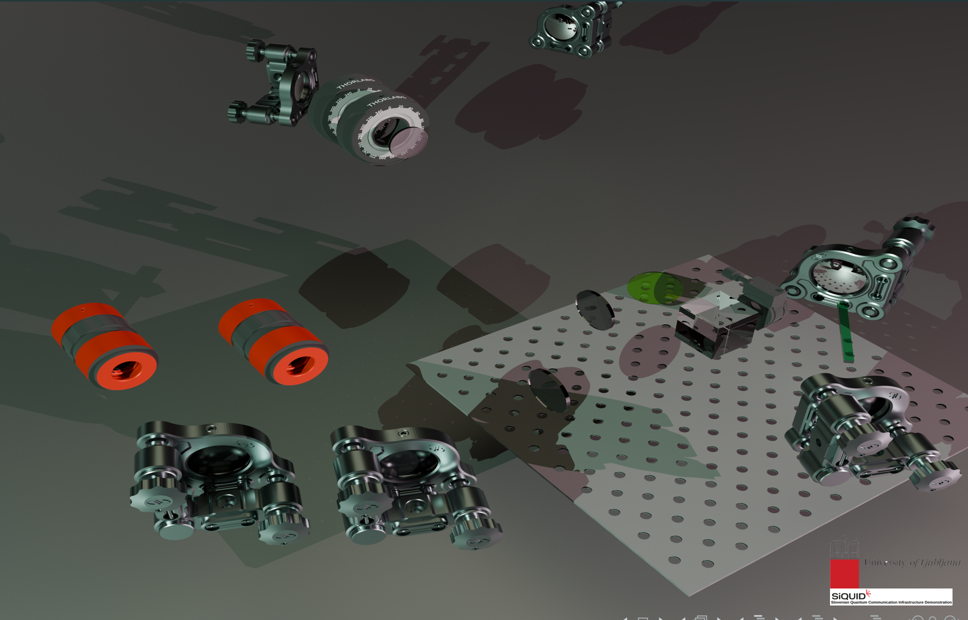
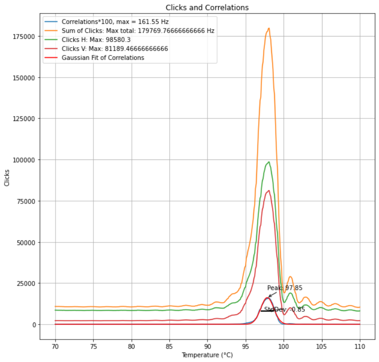
(d)

University of Ljubljana

SiQUID
Slovenian Quantum Communication Infrastructure Demonstration



THORLABS
THORLABS



(a)

Figure: Photograph of the current state of the Sagnac Interferometer.

Outlook

- SiQUID
- Entanglement swapping between FMF and IJS
- Building quantum internet
- Free space link to reactor

Testing, calculating various properties of the system, limitations, Thank you

University *of Ljubljana*
